Kronikár

Installation and sync

How to install Kronikár on Windows, macOS and Android, where it stores your projects, and how to keep them identical on every device.

Contents

1 What you need — devices, files, browser

2 Windows — installer or a single file

3 macOS — Kronikar.html in Chrome

4 Android — installing the APK and updates

5 First start: a folder for your projects — automatic saving to a file

6 Syncing between devices — Syncthing and other options

7 Backups, updates and troubleshooting — when something doesn't work

1. What you need

Kronikár is a writing studio that runs entirely on your own devices. No account, no server, no internet connection required. Your projects are saved to a folder you choose.

DEVICE	WHAT TO DOWNLOAD	RUNS IN
Windows 10 / 11	`Kronikar-Setup.zip` (installer) or `Kronikar.html`	Google Chrome, Microsoft Edge or Brave
macOS	`Kronikar.html`	Google Chrome, Microsoft Edge or Brave
Android 7 or newer	`Kronikar.apk`	its own app, no browser needed

SAFARI AND FIREFOX

Kronikár opens in them, but they cannot save to a folder. Your projects would stay inside the browser and could not be synced. Use Chrome, Edge or Brave.

WHERE TO DOWNLOAD

Only download the files from the project's official page (GitHub, Releases section). That way you know they are genuine.

2. Windows

Installer (recommended)

1. Unzip `Kronikar-Setup.zip` (right-click → **Extract All**).
2. Run `Kronikar-Setup.exe`. If Windows shows a blue **Windows protected your PC** screen, click **More info** and then **Run anyway**. The warning appears because the installer is not signed with a paid certificate, not because it is harmful.
3. Go through the wizard. No administrator rights are needed – Kronikár installs just for you.
4. **Kronikár** appears on the desktop and in the Start menu. It opens in its own Chrome window, or in Edge if Chrome is not installed.

Without installing – just Kronikar.html

Kronikár is a single file. Save `Kronikar.html`, for example to `Documents\Kronikar`, and double-click it. To make it open in its own window like an app, create a desktop shortcut:

1. Right-click the desktop → **New** → **Shortcut**.
2. Enter this location (adjust the path): `"C:\Program Files\Google\Chrome\Application\chrome.exe" --app="file:///C:/Users/NAME/Documents/Kronikar/Kronikar.html"`
3. Replace spaces in the file path with `%20` (for example `OneDrive%20-%20Company`).

4. Name the shortcut **Kronikár**. Change its icon via right-click → **Properties** → **Change Icon**.

> **BRAVE**
> For Brave use `C:\Program Files\BraveSoftware\Brave-Browser\Application\brave.exe`. To enable saving to a folder in Brave, open `brave://flags/#file-system-access-api`, set it to **Enabled** and restart the browser.

Uninstalling

Settings → **Apps** → **Kronikár** → **Uninstall**. Your projects in the folder are left untouched.

3. macOS

1. Save `Kronikar.html`, for example to `Documents/Kronikar`.
2. Right-click the file → **Open With** → **Google Chrome** (or Edge, Brave).
3. To always open it in Chrome: right-click → **Get Info** → **Open with** → Chrome → **Change All...**.
4. For quick access, drag the file to the Dock (the right-hand side, next to folders) or bookmark it.

> **ITS OWN WINDOW**
> To open Kronikár in a separate window without browser bars, run this in Terminal: `open -na "Google Chrome" --args --app="file:///Users/NAME/Documents/Kronikar/Kronikar.html"`

4. Android

1. Download `Kronikar.apk` to your phone (or copy it there).
2. Open it in the **Files** app or from your downloads.
3. Android asks whether this app may install unknown apps. Tap **Settings**, turn on **Allow from this source** and go back.
4. Tap **Install**. If Google Play Protect speaks up, choose **More details** → **Install anyway**. The app is not from the Play Store, so Android does not recognise it.
5. You will find Kronikár among your apps, with a book icon.

Updating

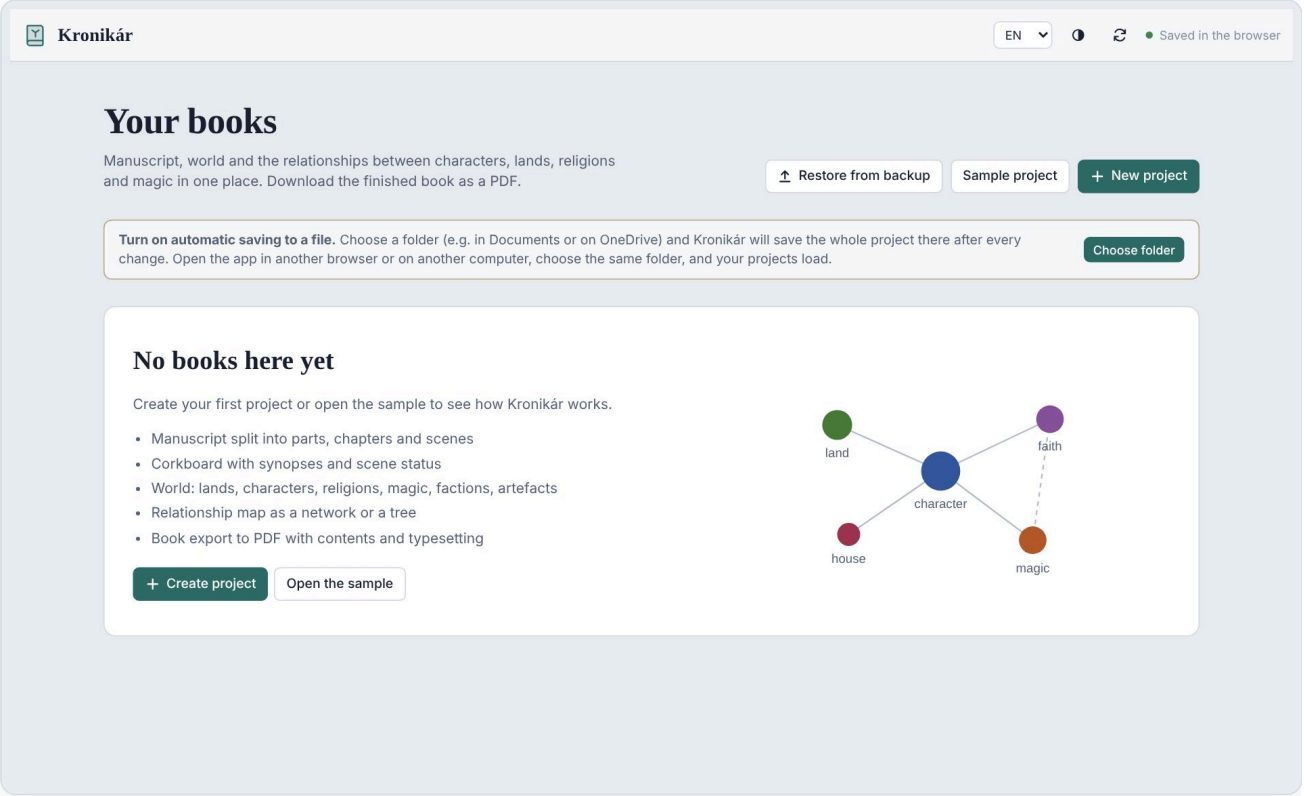

Install the newer `Kronikar.apk` straight over the old version. Your data stays. Do **not** uninstall the old version first – projects that are not saved in a folder would be deleted.

> **WHERE EXPORTS GO**
> On the phone, PDF and Word files from Export are saved to the `exporty` subfolder of your chosen folder.

5. First start: a folder for your projects

Without a folder Kronikár only saves inside the browser. That is fine for trying it out, but not for real work: clearing the browser data would delete your projects, and they could not be synced.

1. Create an empty folder, for example `Kronikar`.
2. On Kronikár's home screen click **Choose folder** and select it.
3. The browser asks for permission to edit files. Confirm with **Allow** / **Edit files**.
4. On Android the system folder picker opens: choose or create a folder and tap **Use this folder** → **Allow**.

The home screen with the Choose folder button.

Each book gets its own subfolder. The files can be read even without Kronikár:

IN THE BOOK'S SUBFOLDER	WHAT IT HOLDS
`projekt.json`	manuscript structure (parts, chapters, scenes), export settings, goals, plot threads, secrets, ideas
`rukopis/`	one HTML file per scene – the text and the scene notes
`svet.json`	World entries, links and your own categories
`poznamky.json`	sticky notes and their categories
`statistiky.json`	writing history and sprints
`obrazky/`	photos of entries and map images

IN THE BOOK'S SUBFOLDER	WHAT IT HOLDS
`verzie/`	saved scene versions
`citatelne/`	a readable copy of the book, world and notes (for viewing; Kronikár does not read from it)
`zalohy/`	a daily backup of the whole book

The main folder also holds `kronikar-sablony.json` (your typesetting templates) and, on Android, `exporty/` (exported files).

WHEN THE BROWSER HAS NOT ALLOWED THE FOLDER

If a folder is set up but the browser has no permission for it in this session, a bar appears under the top bar. After your first edit it turns red – edits are only in the browser for now. Click **Allow folder** and everything waiting is written. Closing the window with unsaved edits asks first.

ALLOW ACCESS

After the browser restarts, the home screen sometimes shows **Allow access**. Just click it – the browser asks again for security reasons.

6. Syncing between devices

Kronikár never sends anything over the internet by itself. To write on both your computer and your phone, you need a program that keeps the same folder identical on all devices. Kronikár then picks up changes from your other devices automatically, roughly every 15 seconds. The ↻ button in the top bar loads them right away.

Recommended: Syncthing

Syncthing is free, open-source software. Devices send files directly to each other – no cloud, no account – and a change arrives within seconds. It runs on Windows, macOS, Linux and Android.

- Website and downloads: syncthing.net
- For Android: the **Syncthing-Fork** app from Google Play or from F-Droid: f-droid.org/packages/com.github.catfriend1.syncthingfork/

1. Install Syncthing on all your devices.
2. Connect the devices to each other (each has an ID; add it on the other device).
3. Share the `Kronikar` folder between them.
4. In Kronikár on every device, choose this synced folder.

For detailed setup steps see the Syncthing documentation – they change between versions, so they are not repeated here.

Other options

Any tool works as long as it syncs a **real folder on disk**, as fast as possible – ideally instantly.

TOOL	NOTE
OneDrive, Dropbox, Google Drive on PC and Mac	work if the folder is stored on the computer (not “online only”)
Android	the official cloud apps usually do not create a real folder – use Syncthing or an app that syncs a folder both ways

DON'T WRITE IN TWO PLACES AT ONCE
Do not edit the same project on two devices at the same time. Editing different scenes, notes or the World on two devices is fine – every part is saved separately. If the same part changes on both, Kronikár shows which one, lets you view the other version and choose. Conflict copies made by Syncthing are offered on the home screen: **Load as a copy** or **Discard**.

7. Backups, updates and troubleshooting

Backups

- Automatic: once a day to the `zalohy` subfolder.
- Manual: **Backup** on the project card, or **Project** → **Download backup**. This creates a `.json` file.
- Restore: **Restore from backup** on the home screen.

New version

WHERE	HOW TO UPDATE
Windows – installer	run the new `Kronikar-Setup.exe`; it replaces the old version
Kronikar.html	replace the old file with the new one (same name and place)
Android	install the new `Kronikar.apk` over the old one

Updating never changes your projects – they live in your folder.

Troubleshooting

PROBLEM	SOLUTION
The Choose folder button is missing	you are using Safari or Firefox – switch to Chrome, Edge or Brave; in Brave enable `brave://flags/#file-system-access-api`
Changes from another device don't show up	check that the sync program runs on both devices and that the same folder is chosen in Kronikár; then click ↻ in the top bar
The home screen shows Allow access	click it – the browser asks for permission again after a restart
Windows SmartScreen or Play Protect warning	the app is not signed with a commercial certificate; if the file comes from the official source, continue via More info / Install anyway
A red bar under the top bar	edits are not in the folder – click Allow folder

PROBLEM	SOLUTION
The World list is empty or the page is half drawn	click ↻; on an unexpected error Kronikár shows a short message – pass it on with a note of what you were doing
